## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claim 1-22, drawn to a method for producing a polypeptide in an avian host cell, classified in class 800, subclass 4.
- II. Claims 23-30, drawn to a method of repopulating an avian host cell with transduced bursal stem cells, classified in class 800, subclass 21.

The inventions are distinct, each from the other because of the following reasons:

Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I is limited to a method for producing a selected polypeptide while Invention II is not so limited and therefore has separate utility such as in the expression of non-coding nucleic acids. Furthermore, the method of Invention II is separately useful for treating an avian host suffering from an immunodeficiency. See MPEP § 806.05(d).

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
